7. (Twice Amended) A network system composed of a print server computer and a plurality of client computers, wherein each of the print server computers and the plurality of client computers has a print data expander for expanding print data to bit-map data in parallel, wherein
each of the plurality of client computers comprises:
a page divider for dividing generated print data for each page into a plurality of bands, wherein the generated print data is generated by an application; and
a transfer controller for transferring a sequentially selected one of the bands to an available one of print data expanders of the print server computer and other client
